Dear Hiring Manager,

I am a Full-Stack Software Engineer experienced in building production web applications across frontend interfaces, backend APIs, databases, and deployment. I have hands-on experience using Laravel, Node.js, NestJS, Express.js, React, Next.js, MySQL, PostgreSQL, Docker, and Linux, and I am interested in contributing to your team as a Software Engineer.

In my current role, I develop and maintain web applications, build backend APIs, work with databases, and support production systems to ensure applications remain reliable and maintainable. I have experience developing business systems involving inventory, payments, dashboards, reporting, QR/PDF generation, automation, background jobs, and API integrations. During my internship, I improved workflow efficiency by approximately 30% and reduced database query execution time by around 40%.

One of my key projects, BMS Fastentix, is a multi-tenant system where I worked on dashboards, inventory, payment workflows, API design, QR/PDF generation, and deployment automation. I also created Shell/Bash and batch scripts to streamline deployment across multiple servers, and configured Supervisor and cron jobs to manage background processes and scheduled tasks.

I have also developed a SaaS multi-tenant Mosque Financial Management System using Node.js, Express.js, React, and PostgreSQL. The system includes cashbook, ledger, bank reconciliation, accounts payable, accounts receivable, dashboards, reporting, subscription management, and Stripe payment integration. In addition, I contributed to the Yayasan Kebajikan Negara MYPSSS System, a welfare care and counselling system used by counsellors to manage programmes, events, assessments, counselling notes, appointments, referrals, and reporting.

Beyond business systems, I have built real-time and cross-platform applications, including multiplayer web applications using WebSocket and a remote mouse system using Flutter and Python. These projects reflect my ability to work across different technologies and build complete end-to-end solutions. I am adaptable, quick to learn new tools and frameworks, and comfortable exploring new technologies based on project needs.

I am excited about the opportunity to contribute to your team and support the development of reliable, user-focused, and scalable software solutions. I would

welcome the opportunity to further discuss how my experience and skills can contribute to your company.

Thank you for your time and consideration. I look forward to hearing from you.

Sincerely,

Muhammad Fauzul Azim Bin Imran Hayat
